

GENDER

This is a visual research trying to form an overview of hyperrealistic robots (androids) and their engineered gender. The research was conducted in one half hour, by googling the words android + robot separate or in combination, with added gender neutral descriptive words (human, human-like, realistic, emotion, beautiful etc.).

All image results depicting, 3D-renderings, robots obviously made of plastic or other non-organic looking materials were disregarded. If the first result of a search had already appeared in another search, the next new image result was selected.

BOT S

This is not a complete guide, but should give a hint about how we gender our robots.
